## What To Look Forward To

Learn factors to consider when implementing an EHR – from integrating into an existing system to planning for growth and adding new health information technologies.

Hear outcomes from the BLUES Project, a comparison study of diabetes patient care from EHR clinics to non-EHR clinics. Learn how EHRs facilitate patients outcomes tracking, improve provider communication, reduce medical errors, and improve quality of care for patients.

Learn how the Dartmouth Atlas Project has documented variations in how medical resources have been used in the United States for 20 years. Using Medicare data to provide information about national, regional, and local markets, this program has helped formed the foundation for many ongoing efforts to improve health and health systems across America.

The Beacon Program provides funding to communities to build and strengthen their health information technology infrastructure and exchange capabilities. Learn how this program supports these communities at the cutting-edge of electronic health record adoption and health information exchange. Hear about the national vision for Beacon Communities and what that means for Mississippi.
